

Happily Ever After: Engineering Solutions to Classic Stories

Nathan Lutz,
Kent Place School

Agenda

Why?

Classic Stories

STEAM

Design Cycle

Practice

Work

Why?

Kent Place School =
Girls' school

Girls typically underrepresented
in STEM fields

...despite interest and ability to
excel in these fields

2014 *Psychological Science* study

Why?

A Seat at the Table

Why?

A Seat at the Table

It is not enough for students to be well-versed in science, technology, engineering, and math in order to solve the world's problems.

They'll also need to be proficient in more than one language in order to communicate with others – whether here at home or abroad.

Classic Stories

Think/Pair/Share

What are your favorite
classic stories from your
culture?

Why are Stories So Powerful?

Brains Crave Stories!

Cortex Activity

Facts are processed in two lobes; highly engaging stories stimulate motor cortex, sensory cortex, and frontal cortex

Neural Coupling

Stories activate part of brain that listeners relate to their ideas and experiences

Mirroring

Listeners relate to each other but also to the story teller

Dopamine

Brain releases powerful dopamine when experiencing emotionally charged events, thus helping memory

Power of Narrative

“I’m a narrative learner. I nail down concepts by aligning them to stories or make up stories about them.” – Lev Fruchter

“Research shows that when STEM problems have a narrative, students working on those problems are more engaged” – Nathan Lutz

“In addition, combining reading with engineering provides boosts in literacy development.”

– Nathan Lutz

Telling a Story

What are the elements
of a story?

Think/Pair/Share

Telling a Story

What are the elements
of a story?

- Characters
- Plot
- Setting
- Details
- Themes
- Text
- Subtext

Telling a Story

Does substance matter?

Telling a Story

Does substance matter?

- Is it good storytelling?
- Is it compelling?
- Are the characters relatable?

STEM/STEM

Not just an acronym!

It's a philosophy – a way to approach problems, blending knowledge and creativity – to invent new solutions to old and new problems

STEM & Early Learners

Children are naturally curious

Children's hands need to be
engaged

Children are concrete learners,
working on becoming abstract
learners

Workforce-Pipeline Issues

Design Thinking

Empathy with an audience

Definition of the problem

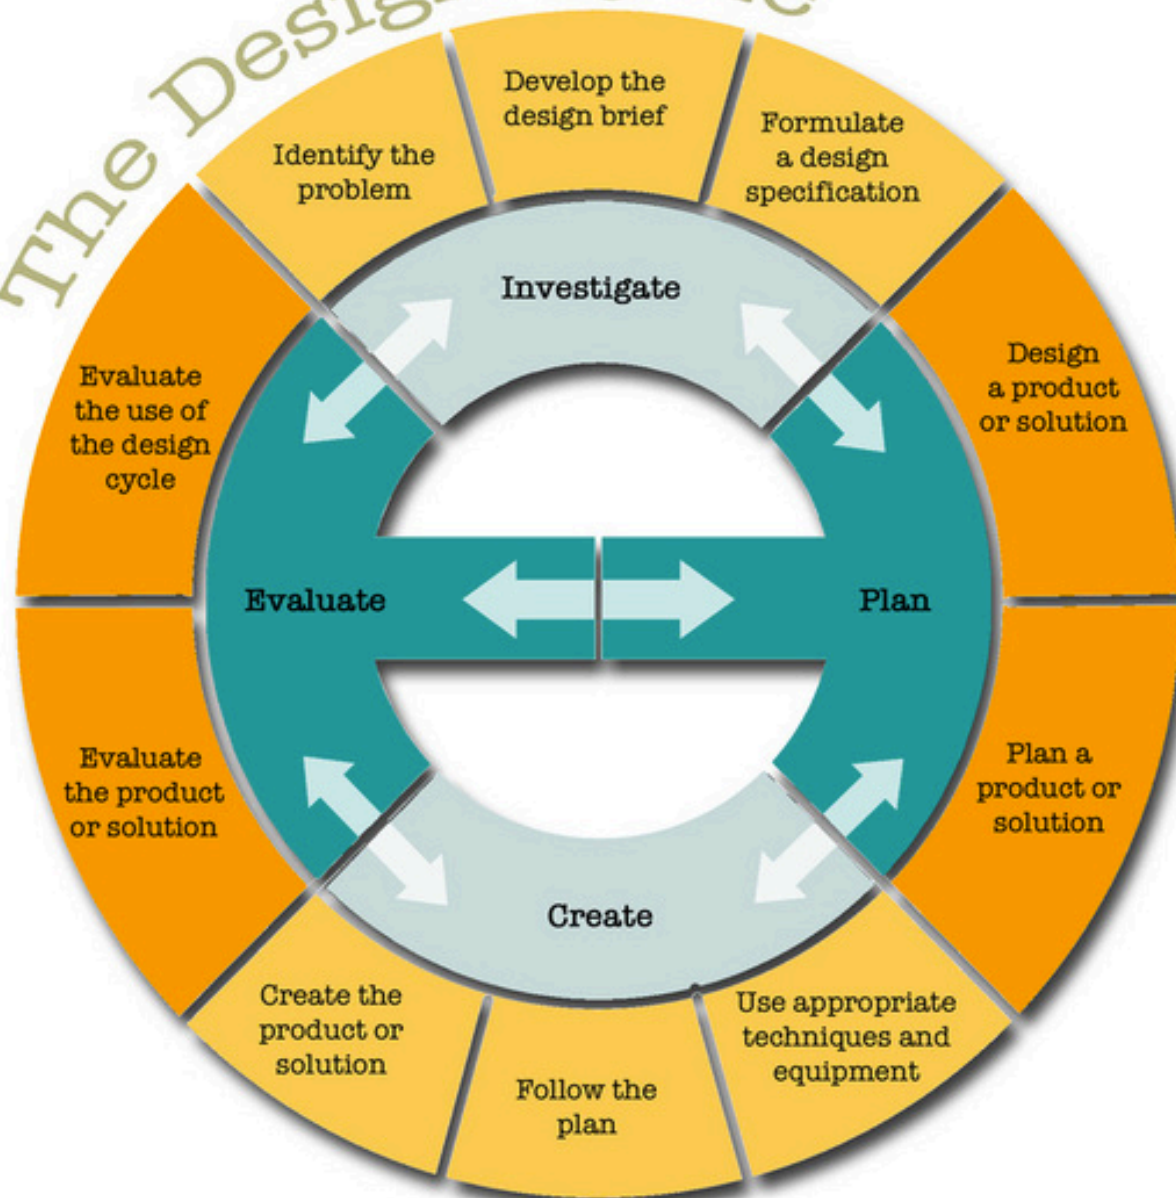

Ideate a solution

Build a prototype

Test the prototype

The Design Cycle

Method

- Start with a compelling tale
- Define the problem
- Give learners the supplies/
constraints
- Allow students time to ideate,
design, build, and test
- Return to the drawing board
if needed

Example

- Start with a compelling tale
- Define the problem
- Give learners the supplies/
constraints
- Allow students time to ideate,
design, build, and test

Setting
Characters
Plot
Problem
Solution

Challenge:

Design a bridge that the people can safely cross

Constraints:

Popsicle sticks

Masking Tape

Paper

Must span 12 inches

“Sometimes it’s frustrating
because the thing you
want to make fails.

But that’s part of the process.”
– Claire

an original tale written and illustrated by Tomie de Paula

Strega Nona

Alain chiche

LES TROIS PETITS COCHONS

Seuil
jeunesse

“Sticky Tape”

Time for You!

- Arrange yourself by the language that you teach.
- Think of a story you teach/might teach.
- What STEM projects can you identify
- What language structures can accompany this project?
